Dear Dan:

This proposal is in response to your letter No. 22005 dated 5 December 1957 in which you requested us to submit a proposal for installing Right-Left Switching provisions for Bands 1A and 1B of System 4. These provisions have already been described in the technical exhibit which accompanied our original proposal dated 30 October 1957 (CMCC Document No. 1133X5.48). We are, however, submitting a new Statement of Work, Delivery Schedule and Cost Estimate.

We propose to modify the airborne portions of this system by a combination of field kits and pre-delivery modification. We can provide field kits for Models 101 and 102 if they are not returned to this location for other work as currently anticipated. Model 103 can be modified prior to delivery, and Models 104 through 107 can be modified during fabrication without affecting existing Delivery Schedules.

Both "M" Rack prototype models can also be modified prior to delivery. We propose to modify the engineering model now overseas with a field kit installed by our resident field engineer. The "M" Rack engineering model at Headquarters can best be modified by shipping it back to us as we feel that we do not have the necessary personnel or equipment to do it successfully there. Our cost estimate is based on this assumption. If you feel that you cannot spare the rack for the week or so this would take, we can send back a special R&D engineer, at extra cost, to install a field modification kit.

We plan to modify the improvised System 4 Test Set now in the field with a field modification kit. The remaining three production test sets can be modified prior to delivery.
